BCI433 Lab 7 (Summer 2018)

Lab objectives:

- Update a master file with adds/changes and deletes from a transaction file
- Use a CLLE driver program to automate testing of the update program
- View the journaled changes made to the master file

Requirements to pass the lab:

All the parts for this application will be handed out. The RPGLE program, the CLLE driver program, and the master and transaction files. You need to adapt this application so you can update a master file in your own collection. **Successfully run the CLLE program updating data in a collection created by you and be able to show the add, update and delete journaled changes.**

Call RunLab7
SALESSTAF2 – data comes from SALESSTAFF in BCI433LIB

Steps to successfully run lab 7

1. Create a source physical file called LAB7

2. Create a collection using parts of your id (mine is DM433B40 so I will use DM and B40. The U stands for update and is common for all ids.

CREATE COLLECTION DMUB40

3. Copy the provided code in BCI433LIB/Lab7Code. The RPGLE program is called SLSTRNPGM and the CLLE program is called RUNLAB7. Study these programs. The code has been supplied for both on the next pages. You will need to write out four lines that will be provided in class for each program. These will be included in your copied members before compiling.

4. Also change the CLLE code so it refers to your data, journal and output queue.

RPGLE program to apply the updates

```
